AI Overview

Turborepo does not have a direct analog to `nx migrate` because it operates with a minimalist, zero-config philosophy rather than managing an automated dependency and code-migration engine. Instead of automated multi-package codemods and version upgrades, Turborepo relies on standard package manager workspaces (pnpm, npm, yarn) and manual `package.json` updates. 13Labs +4

Why Turborepo Doesn't Need `nx migrate`

- **Zero-Config Task Runner:** Turborepo wraps the scripts you already write in your individual `package.json` files. It does not inject its own custom plugin architecture or build graph metadata into every single package. Turborepo +2
- **Package Manager Native:** It delegates workspace linking, dependency resolution, and versioning directly to tools like pnpm, npm, or yarn. Upgrading dependencies is just a standard package manager upgrade (`pnpm update` , `npm update`). YouTube · Code with tks... +1
- **Manual Setup & Migration:** Moving to Turborepo or updating it involves creating or editing a root `turbo.json` file and bumping the `turbo` package version in `package.json` .

How to Handle Version Updates and Migrations in Turborepo

- **Upgrading Turborepo:** Simply update the `turbo` dependency in your root `package.json` (and global install if used) using your package manager:

bash

```
npm install turbo@latest -D
# or
pnpm add turbo@latest -D -w
```

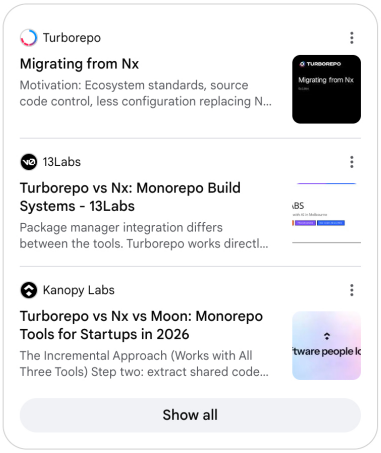

Use code with caution.

- **Migrating from Nx to Turborepo:** If you are moving away from Nx entirely, follow the official Migrating from Nx Guide to strip out Nx configurations, map your task pipelines into `turbo.json` , and clean up plugin references.
- **Handling Breaking Changes:** Turborepo releases rarely introduce sweeping breaking changes to workspace structures. When they do, check the official Turborepo Release Notes / Changelog and update your `turbo.json` schema properties manually.

Are you trying to ↪ **upgrade Turborepo to a newer version**, or are you ↪ **migrating an existing project** from Nx or another tool? Let me know and I can guide you through the specific steps.
